

ToolsOnAir just:store Storage and Archiware P5

Workflow integrated data Management

Full just:store and Archiware P5 production setup: P5 Synchronize for data Cloning, P5 Archive for long-term Archiving

ToolsOnAir Broadcast Engineering, developers of the "TV station in a Mac" and the just:Broadcast Suite and Archiware, developers of the **P5 Software Suite** for professional data **Synchronization, Backup and Archiving** have joined forces to provide a unique multi-tiered storage and archive solution for the broadcast industry.

The **just:store high performance storage and workflow appliance** is the latest addition to ToolsOnAir's product range. It provides low latency, extremely consistent bandwidth, easy file level access and scalability to fulfill the demands of broadcast professionals.

To ensure maximum data availability and security, just:store is combined with **Archiware P5 Synchronize and P5 Archive**.

P5 Synchronize mirrors data onto a secondary just:store to make sure that, in case of emergency, a simple switch to the mirrored storage will give access to all data without the need for a restore.

Archiware P5 Archive migrates data from just:store to disk, tape and cloud. Finished projects and unused material no longer take up space on the production storage, so it can always be used to its full capacity for current content.

At the same time, archived material is stored safely and can be searched and restored using the Archive catalogue, including metadata and preview files.

Archiving on LTO tape is the most cost effective and safe way of storing your material, with the lowest cost per TB of any storage media and a certified life span of 30 years. Archiware P5 Archive is compatible with LTO tape drives and libraries from all manufacturers.

Advantages of the just:store/P5 Archive Solution:

- ✓ Designed for the needs of broadcasters
- ✓ Immediate availability through data cloning
- ✓ Data Security thanks to long-term Archiving
- ✓ Cost reduction due to economic use of online storage space
- ✓ Easy Administration, set up in minutes
- ✓ Professional long-term storage on LTO tape
- ✓ Parallelization for higher performance (multiple drives only)
- ✓ Tape cloning for offsite storage
